

Phlebotomy Skills Phlebotomy Assessment Service

Phlebotomy Assessment Service

We will observe members of your phlebotomy staff to undertake an initial assessment of their practice against Standard Precautions, National Occupational Standard CHS132, and your own phlebotomy policies and procedures and give feedback regarding practice and behaviours.

From the point of initial assessment these staff will record the draws that they have undertaken on a sheet that we will provide until they have recorded in excess of 75 bloods.

Return and observe each candidate taking blood, anticipating that the feedback previously offered will have been acted upon and if that is the case to put the candidates forward for Certificate of Applying Phlebotomy Techniques (level 3 1 Credit)

Upon completion of the assessment a report will be drawn up in respect of each candidate which will set out the feedback initially given and will demonstrate how that feedback was acted upon and if applicable give further feedback.

The cost of this service will be dependent upon the number of participants to be assessed and the venue of the assessments.
